

Claim Amendment under 37 C.F.R. 1.121c

1. (Currently Amended) ~~For device distributing storing ice cream, Portable ice cream distribution device has central part (100) and side part (101) divided by partition board (12) and outside is made with adiabatic substances. It is composed with container (10) with grooved on the inner center, cover made of adiabatic substance with packing forming hole in the middle, activation device (30) with lever (31) fixed on upper side of activation axis (32) mentioned earlier and with hem of activation axis (32) penetrating the packing and activation plate (34) placed on screw groove (33) formed outside, and combination of discharge devices such as discharge pipe (41) forming hole on prescribed part of bottom side of container and tube (43) with knob (44) connected to the discharge pipe and finally discharge outlet (45) on the hem. A portable ice cream distribution device comprising:~~

- a) a container (10) made of adiabatic substance (21), wherein the container comprises a central part (100) storing ice cream and a side part (101) storing cooling substance, wherein the central part and the side part are divided by a partition board (12);
- f) a cover (20) that is made of adiabatic substance (11) and that closes the container, wherein the cover comprises a hole;
- g) an activation device (30) that comprises an activation axis (32) and an activation plate (34), wherein the activation axis (32) penetrates the hole of the cover and comprises a screw groove (33) formed on the outer periphery of the activation axis, wherein the activation plate (34) comprises a hole that engages with screw groove whereby the activation plate can ascend or descend with rotation of the rotations axis, and a ball bearing (35) that is positioned in the hole of the activation plate and engages with the screw groove of the activation axis;
- i) a discharge pipe (41) that forms a hole at a predetermined location on the bottom of the container;
- j) a discharge outlet (45) that discharges ice cream out of the device; and
- k) a tube (43) that connects the discharge pipe and the discharge outlet.

2. (Currently Amended) ~~In claim 1, Portable ice cream distribution device which has motor on prescribed portion of cover replacing lever mentioned above and battery running this motor and device which is equipped with switch on the knob controlling rotation of motor and which the rotation of motor transmits to activation axis (32).~~ The portable ice cream distribution device of claim 1, wherein the activation device further comprises a motor provided on a predetermined location on the cover, a battery running the motor, and a switch that controls the motor, wherein the motor rotates the activation axis (32).
3. (Cancelled)
4. (Currently Amended) ~~In claim 3, Portable ice cream distribution device with additional device such as hanger part (14) fixing the tube on a side of outer portion of container or case (17) holding the cone cup~~ The portable ice cream distribution device of claim 3, further comprising a handger part (14) that fixes the tube outside the container and a case (17) that is adapted to hold cone cups.
5. (Currently Amended) ~~In claim 4, Portable ice cream distribution device with addition device such as strap (102) to hold the device on body or support (16) to put the device on ground~~ The portable ice cream distribution device of claim 4, further comprising a strap (102) to hold the device on the body of a user, and a support to put the device on the ground.
6. (New) The portable ice cream distribution device of claim 1, the activation device further comprises a lever (31) that is fixed on the upper end of the activation axis (32).
